Introduction

The Directorate-General for Health and Food Safety of the European Commission develops and implements the Commission's policies on food safety and public health. Its Directorate for Health and food audits and analysis ("the Directorate") dedicates most of its resources to controls. These monitor the implementation and enforcement of European Union (EU) legislation in the areas of food and feed safety, animal health, animal welfare, plant health (the agri-food chain domain) and in certain areas of human health (the health domain).

The Directorate-General published the Health and food audits and analysis work programme 2024 on the European Commission's website¹. This provides the priorities for Commission controls in 2021-2025 and the detailed activities planned for 2024.

The present document updates the detailed programme of controls for the second half of 2024. It takes account of changes that have become necessary as the year progressed. These changes result from the reprioritisation of controls and resources in order to better contribute to the Commissioner's mandate. Some of the planned controls affected by these changes have been postponed to 2025. Some of the countries shown as "to be confirmed" in the published work programme 2024 are named in this update.

Annexes 1 to 3 provide the lists of controls planned from July to December 2024 per country. Annex 1 relates to Member States, Annex 2 relates to candidate countries and potential candidates, and Annex 3 to third countries.

In addition to the controls listed in these annexes, the Directorate plans to perform other activities in the second half of 2024:

- Audits of countries that are still to be confirmed. In the Food domain, it concerns three remote assessments of third countries on the production of casing products intended for export to the EU and nine remote assessments on fishery products of third countries exporting small quantities to the EU.
- Analyses of Member States' plant health contingency plans for priority pests and multi-annual survey programmes;
- Demand-led controls described in annex 1 to the published work programme 2024, such as medical devices joint assessments, fact-finding missions in laboratories carrying out testing in support of regulated product submissions and analyses related to the (re-)designation of border control posts;
- Non-control activities described in section 6 of the published work programme 2024, for which work is in progress.

The Directorate may have to review plans for controls if the circumstances require a change of priorities or prevent the performance of a control.

Further information on the work of the Directorate can be found on the Commission's [website](#). This includes information on:

- audit reports (of an individual audit or a similar control);
- overview reports (of a series of controls on a specific topic);
- annual reports (describing the overall outcome of the national and Commission control activities);
- EU Member States' country profiles;
- live map of audits and similar controls in a particular year; and
- informative videos on how the Directorate carries out its controls.
